

## Genus *Aquidulcis*

---

### Etymology

[A.qui.dul'cis] L. fem. n. *aqua*, water; L. fem. adj. *dulcis*, sweet; N.L. fem. n. (n. l. fem. adj. used as a substantive) *Aquidulcis*, an organism of freshwater

### Nomenclatural type

Species *Aquidulcis frankliniae*<sup>Ts</sup>

### Description

The genus is established on the basis of Average Amino Acid Identity (AAI) and phylogenetic reconstruction using comparative genomics of the genus representatives and representatives of “*Ca. Limnocylinidrus*”. A placeholder identifier has been assigned to this genus in GTDB as g\_UBA10416. Heterotrophic aerobic bacteria with genomic capability for reductive dehalogenation but not sulfite oxidation. The type species is *Aquidulcis frankliniae*.

### Classification

*Bacteria* » *Chloroflexota* » *Candidatus Limnocylinidria* » *Candidatus Limnocylinidrales* » *Candidatus Limnocylinidraceae* » *Aquidulcis*
