

Genus *Candidatus* Halectosymbiota

Etymology

[Hal.ec.to.sym.bi.o'ta] Gr. masc. n. *hals*, *halos*, salt, salt water; Gr. prep. *ektos*, outside; N.L. masc. n. *symbiota*, one who lives with a companion, partner (from Gr. n. *symbiotes*); N.L. masc. n. *Halectosymbiota*, an ectosymbiont from salt water organisms

Nomenclatural type

Unknown

Description

Filker (2021): The genus *Candidatus* Halectosymbiota corrig., originally described as *Ca.* Haloectosymbiotes, was established based on a 16S rRNA taxonomic marker gene sequence of the only identified species in this genus, *Candidatus* Halectosymbiota riaformosensis.

Classification

Archaea » “Euryarchaeota” » *Halobacteria* » *Halobacteriales* » *Halobacteriaceae* » *Candidatus* Halectosymbiota
